

e-SOTER

Regional pilot platform as EU contribution to a
Global Soil Observing System

Standards and services for Soil and
Terrain Data Exchange: SoTerML

Daniel Simms, Stephen Hallett

e-SOTER work package 6 team

Amir Pourabdollah, The University of Nottingham

Andrew Rayner, Cranfield University

Daniel Simms, Cranfield University

Didier Leibovici, The University of Nottingham

Einar Eberhardt, BGR

Hannes I. Reuter, ISRIC

Piet Tempel, ISRIC

Rainer Baritz, BGR

Stephen Hallett, Cranfield University

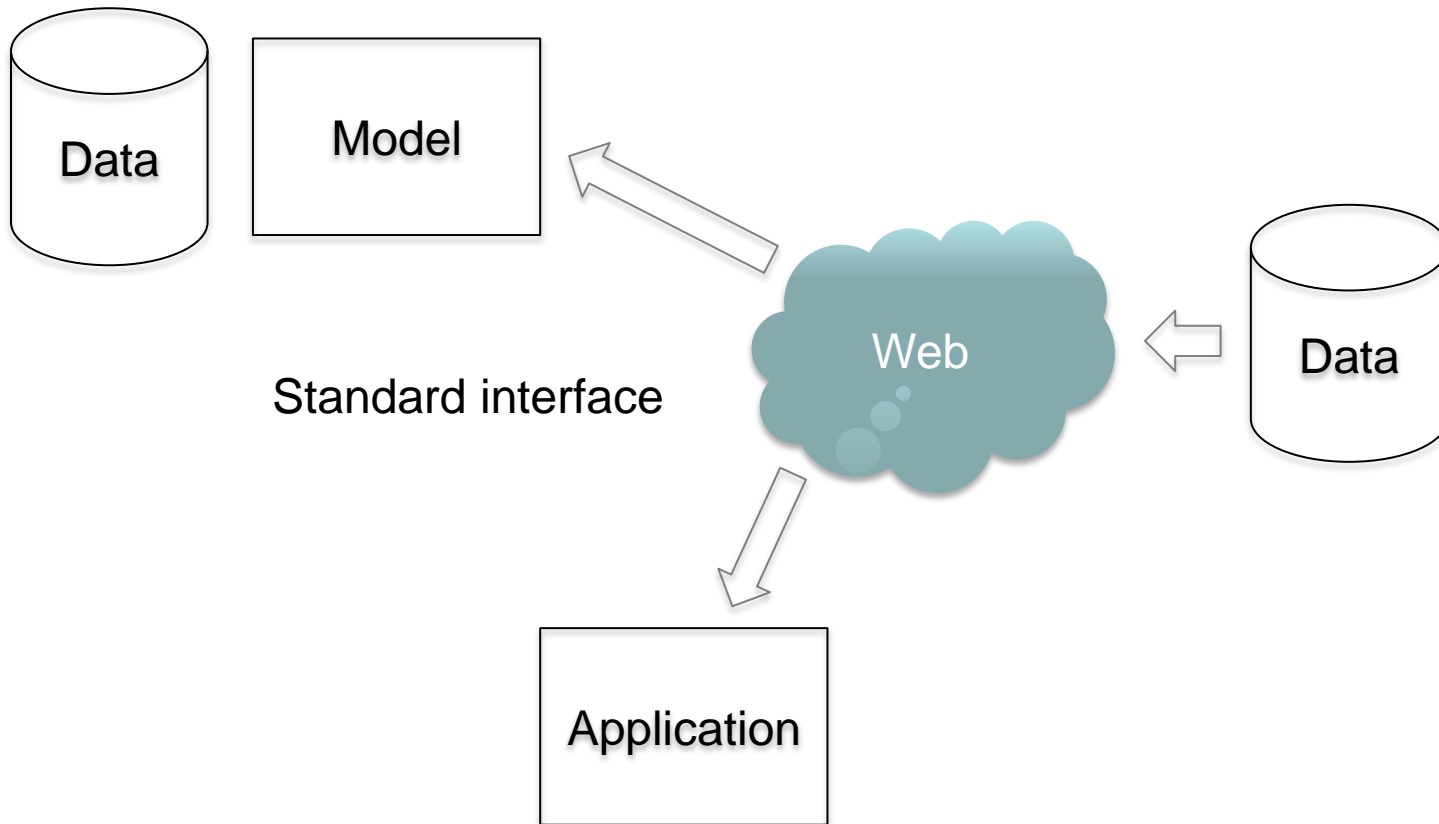

Vit Penizek, Czech University of Life Sciences / IES JRC

Yusuf Yigini, JRC

Reporting based on our paper:

Pourabdollah, A., Leibovici, D.G., Simms, D.M., Tempel, P., Hallett, S.H. and Jackson, M.J. Towards a standard for soil and terrain data exchange: SoTerML (2012) Computers and Geosciences. <http://dx.doi.org/10.1016/j.cageo.2011.11.026>.

- Development of an exchange format for soil and terrain data
- Based on interoperability principles
- Separate the data from the application
- Use existing interfaces

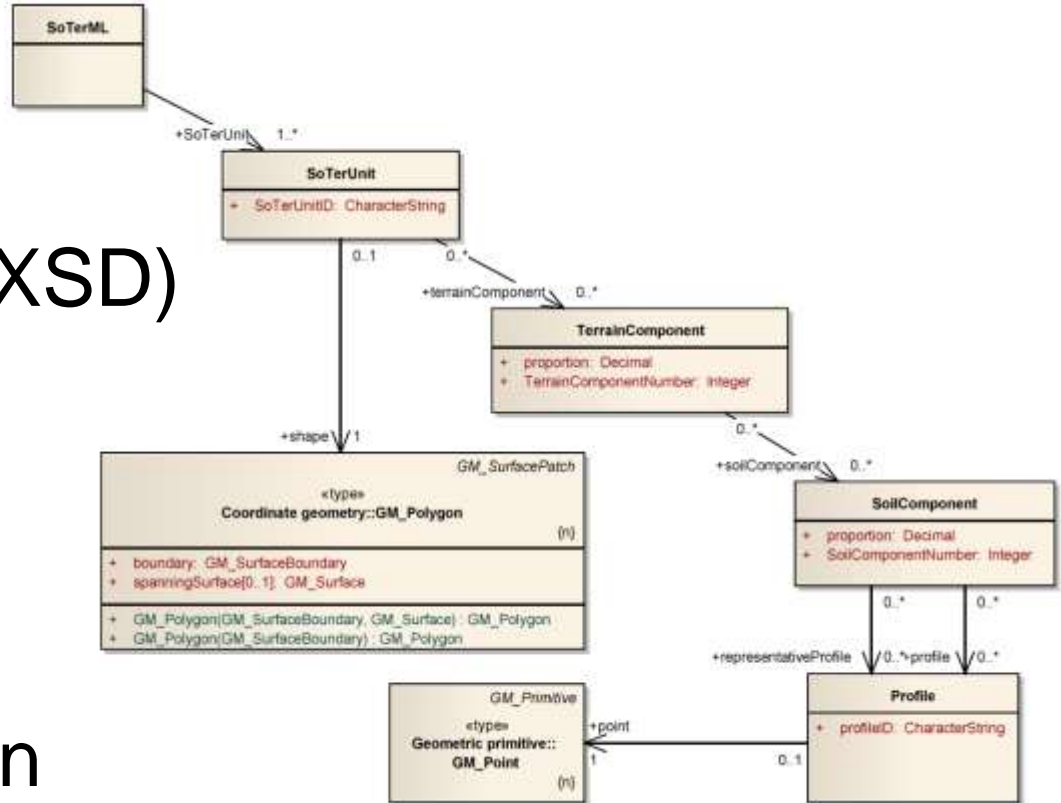

- XML is the language of the web
 - machine and human readable
 - standard interfaces (OGC & ISO) use XML
 - structured and addressable elements
 - Integration
- Schema - describes the data
- Instance document – the data

- Geography Markup Language
- XML grammar for structuring and exchanging geographic data
- Application schemas allow user communities to add their own grammar based around GML
- Interoperability of geographical datasets led by OGC
- OGC Web Feature Services

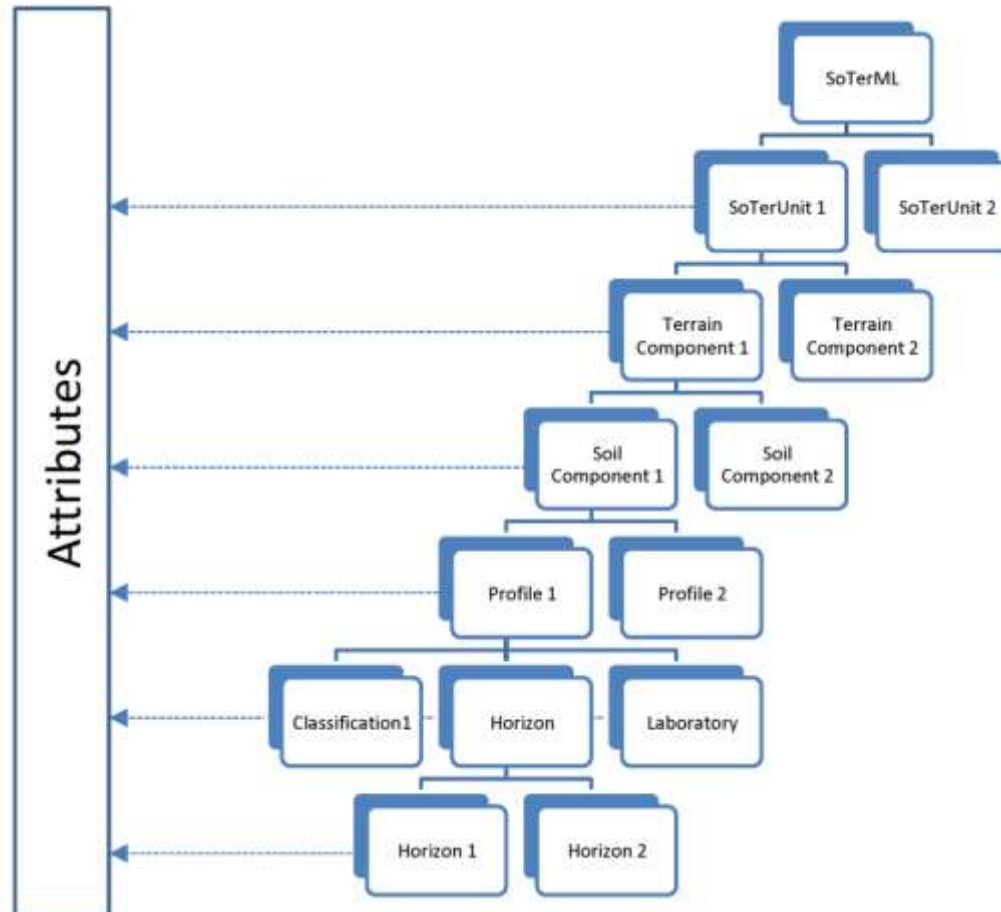

- INSPIRE – spatial data infrastructure based on OGC standards
- GEOSS – European ‘system of systems’
- GeoSciML – GML application schema developed by European geological community for query and exchange of data
- SODA – ENVASSO soil database
- ESD and SOMIS services
- ISO – Recording and exchange of soil-related data
- Soil-ML – Conceptual model for global adoption

- Data model (UML)

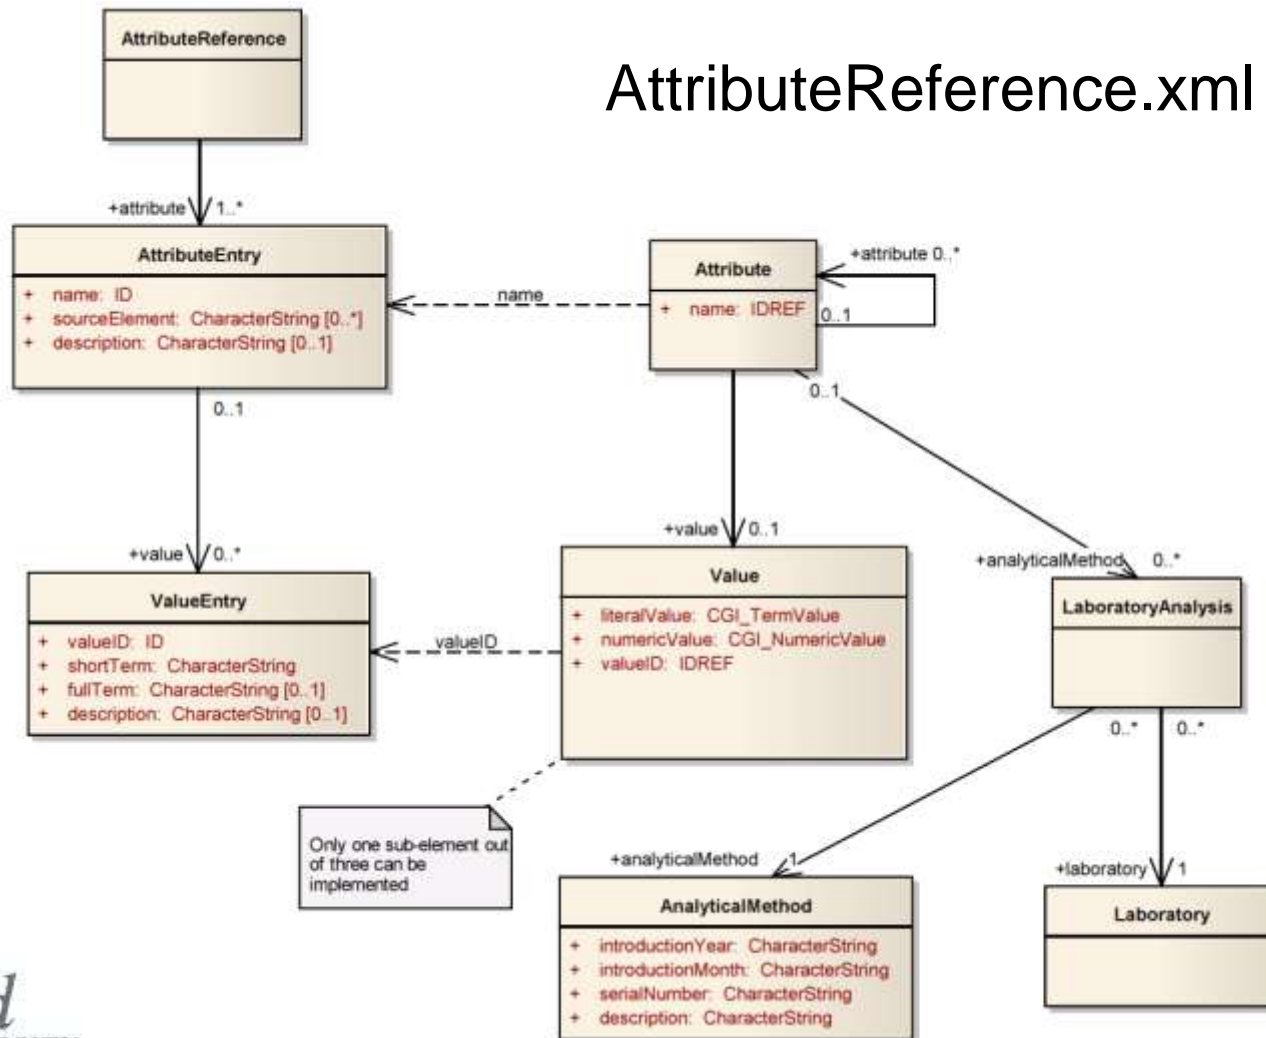

- Attribute pattern

- Separation of attributes from class hierarchy

- Acceptable value defined in the attribute pattern

- Fixed

...

```
<horizon>
```

```
  <clayMineralogy>CH</clayMineralogy>
```

...

- Open approach used

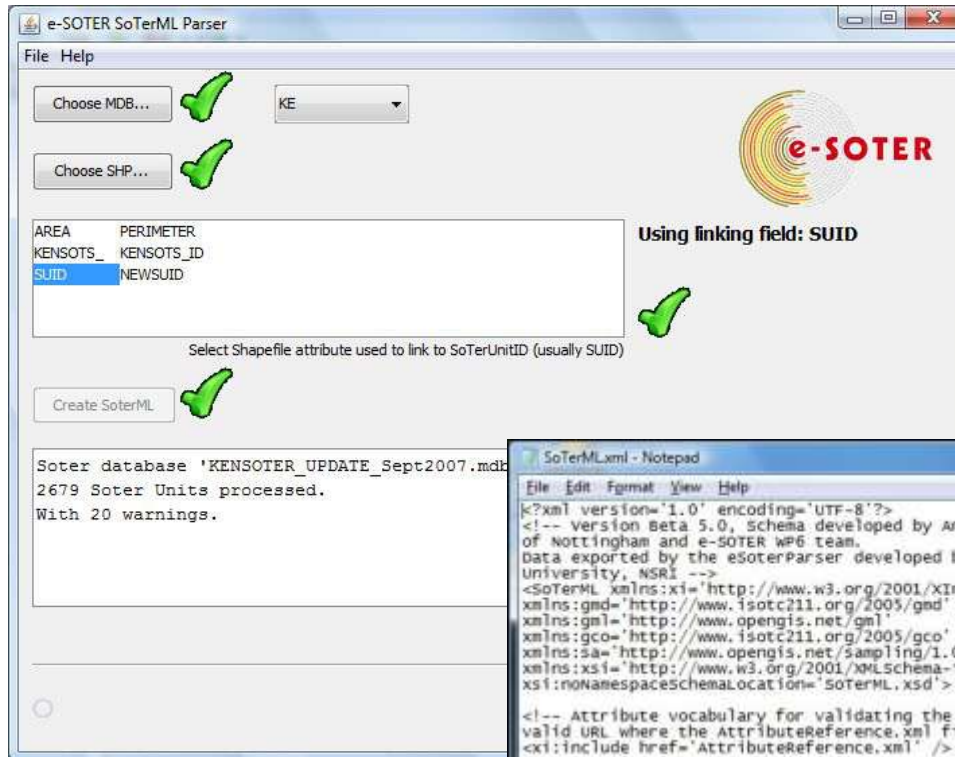

...

```
<horizon>
```

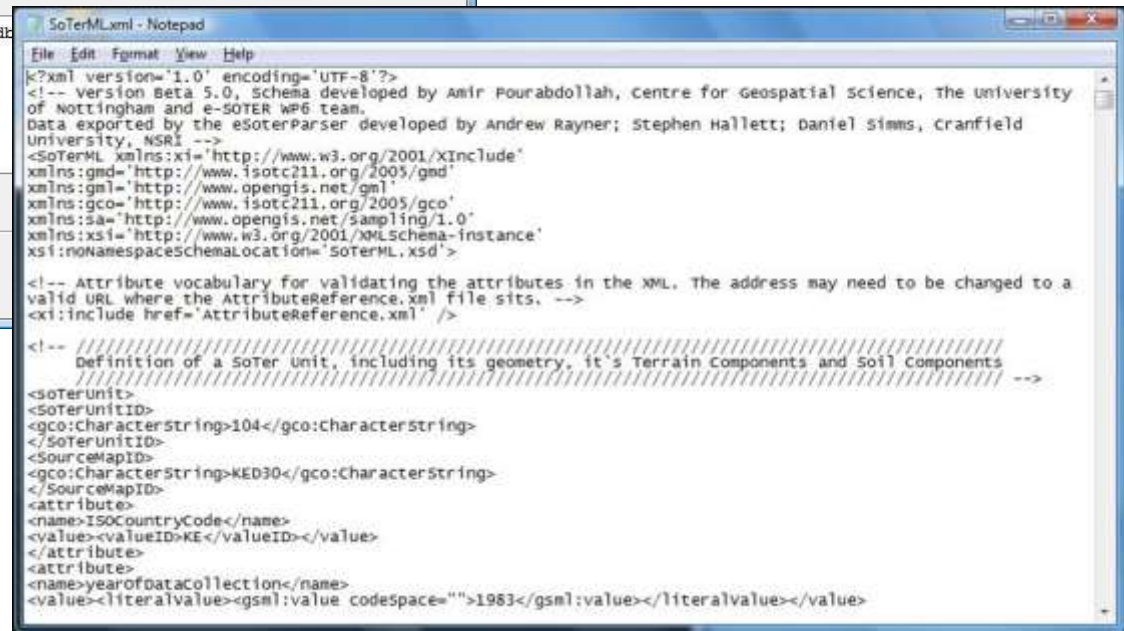

```
  <attribute name="clayMineralogy">
```

```
    <value>CH</value>
```

...

The screenshot shows the 'e-SOTER SoTerML Parser' window. It features a 'File Help' menu, 'Choose MDB...' and 'Choose SHP...' buttons with green checkmarks, and a dropdown menu set to 'KE'. A table lists attributes: AREA, PERIMETER, KENSOTS_, KENSOTS_ID, SUID, and NEWSUID, with 'SUID' highlighted. A text box contains 'Using linking field: SUID' with a green checkmark. Below it is a 'Create SoterML' button with a green checkmark. The status bar at the bottom reads: 'Soter database 'KENSOTER_UPDATE_Sept2007.mdb' 2679 Soter Units processed. With 20 warnings.'
